Details Page

In this page we describe how a details should be configured.

Details Config Schema

actionButtonsConfig	Object Array<Object>	true	Configures the action buttons that appears at the top of the details page. This property accepts an object or a list of objects of type Action Button List .
widgets	Array<Object>	false	Configures the page widgets. Each object contains the configuration needed for a specific widget. Please check the Widgets section to see the available widgets.
extraResources	Object	true	If given, it will fetch the content of a GET request apart from the event details request and attach it to the detail object. Example input: <pre>{ ... extraResources: { "sarInformation": "case-detail-extra/{{id}}" } ... }</pre> Output on the case detail object: <pre>{ ... "sarInformation": { id: 1, sample: "sample" } ... }</pre> When using this configuration, please add a translation for the resource you are adding with this format: details.extraResources.<resourceKey>.error. i.e. details.extraResources.sarInformation.error = "Error fetching the information regarding SAR"
