Generated Fields

The Inbound Payments API generates some fields which will be sent to the Pulse Workflow alongside the ones received in the API.

event_type

The `event_type` will be set according to the endpoint used to receive the request:

Endpoint	event_type
Initiation	inbound_payment_initiation
Info	info
Settlement	settlement
Feedback	feedback

event_received_at

The `event_received_at` represents the time the request reached the Inbound Payments API as a timestamp, in milliseconds.
