## SLAs

Service Level Agreements (SLAs) allow you to automate the organization of events into queues based on a time period. This page provides you with the first version of HSBC operations flows with the corresponding SLA's.

### Delay to Send Customer Notification<sup>â</sup>

This SLA delays a notification dispatch for 1 minute. Upon breach, the SLA sets the event status to `Contact Customer`, starts the [Wait for Customer Response](#) SLA and sends an external notification to the customer. During this SLA if Case Manager receives a notification from Condor to not notify the customer this SLA will not be breached.

### Wait for Customer Response<sup>â</sup>

This SLA adds events to the Manual Queue when the customer fails to reply after 2 hours.

### 24h to Review<sup>â</sup>

This SLA closes and marks as Not Fraud events that are currently assigned to an analyst but there was no decision made within a 24 hour period.

### 2h on Hold<sup>â</sup>

This SLA sets events to an Unreviewed state after being on hold for a 2 hour period.
