HSBC-3168-Add-performance-related-Ansible-variables-for-cross-channel-metrics

Add performance-related Ansible variables for cross-channel metrics

Feature HSBC-3168

Also In: 2.4.10 2.5.7 2.8.1 2.9.0

We've added Ansible variables that can be used to control the performance of cross-channel metrics:

- `cross_channel_metrics_fetch_timeout_ms` controls the timeout when fetching cross-channel metrics (defaults to 200ms)
- `cross_channel_metrics_num_threads` controls the number of threads used when fetching cross-channel metrics (defaults to 1)

More information can be found in [Pulse Configuration Recommendations](#).
