HSBC-3137-Add-CMEK-configuration-for-DTP-resource-creation

Add CMEK configuration for DTP resource creation¹

Feature FTMT-27701 HSBC-3137

Also In: 2.8.1 2.9.0

We've added Customer-managed encryption keys (CMEK) support for the DTP service.

The key name can be configured by using the `otp_security_kms_key_name` Ansible variable. If omitted DTP resources will have the default behaviour and use Google-managed encryption keys.

The key configuration should follow the format described in [Configured a topic with CMEK](#).

Please refer to [DTP configuration](#) and [GCP permission required for using CMEK](#) for more information.
