# Firewall Rules for Cassandra

This page is based on the architecture of Feedzai standard solutions. Specific clients or custom solutions may have additional requirements, so this is not a definitive guide.

## Inbound

Inbound other services connect to this service.

| Service                | Port          | Description                    |
|------------------------|---------------|--------------------------------|
| Cassandra              | TCP 7000-7001 | Cluster communication          |
| Pulse                  | TCP 9042      | Requests from Cassandra Driver |
| Reference Data Service | TCP 9042      | Requests from Cassandra Driver |
| SSH                    | TCP 22        | SSH access (if available)      |

## Outbound

Outbound this service connects to external services.

| Service   | Port          | Description                |
|-----------|---------------|----------------------------|
| Cassandra | TCP 7000-7001 | Connection to the database |
