

connectors [↗](#)

Connectors [↗](#)

```
Connectors(pyjnius_java)
```

Bases: [JavaWrapper](#)

Connectors class that allows users to define if the connectors should use encryption or not.

Note

By connectors we mean the PulseConnector and AppEngineConnector that are used by the Java DS API to connect to Pulse or the AppEngine respectively.

subclasses **class-attribute** **instance-attribute** [↗](#)

```
subclasses: List[JavaWrapper] = []
```

with_encryption **staticmethod** [↗](#)

```
with_encryption()
```

Sets the Connectors to use encryption.

without_encryption **staticmethod** [↗](#)

```
without_encryption()
```

Resets the connectors to use no encryption.
