

group

get_group

```
get_group(pulse: Server, group_name: Optional[str] = None)
```

Pulls Pulse job profiles that match a given name.

Parameters:

Name	Type	Description	Default
<code>pulse</code>	<code>Server</code>	The ds_api.Server used to communicate with Pulse.	<i>required</i>
<code>group_name</code>	<code>str</code>	Desc name of the Pulse group model, by default None	<code>None</code>

Returns:

Type	Description
<code>(JavaWrapper, optional)</code>	A wrapper of 'com.feedzai.pulse.api.security.model.GroupModel', or None if it was not able to find a group model with a given name.
