Ad-Hoc Investigations (with add-on)

Ad-hoc investigations allow fraud prevention agents to initiate an investigation for a specific merchant from an external source (e.g. a regulator requesting a specific merchant assessment) or on an ad-hoc basis.

This channel also leverages the Merchant Monitoring workflow by incorporating insights from ad-hoc investigation events. This is accomplished through cross-channel metrics, which allow the Merchant Monitoring workflow score to consider relevant events or data from this channel.

This guide provides you with the following information:
