## Generated Fields

Was this page helpful?

The Transfers API generates some fields which will be sent to the Pulse Workflow alongside the ones received in the API.

### event\_type

The `event_type` will be set according to the endpoint used to receive the request:

| Endpoint   | event_type          |
|------------|---------------------|
| Initiation | transfer_initiation |

| Endpoint   | event_type |
|------------|------------|
| Info       | info       |
| Settlement | settlement |
| Feedback   | feedback   |

**event\_received\_at**

The `event_received_at` represents the time the request reached the Transfers API as a timestamp, in milliseconds.
